

A future-forward solution for post-COVID dentistry

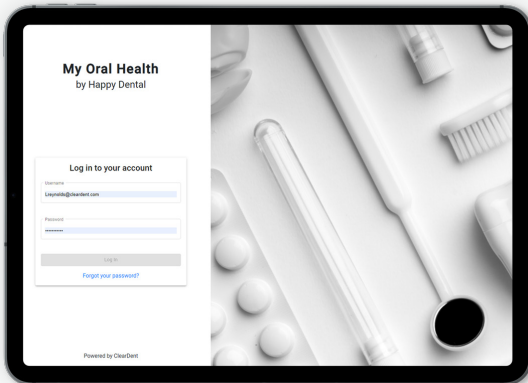

Patient Portal decreases the time needed for patient intake, allowing them to fill out required documentation - and adds it automatically to their patient files - before ever seeing them in-person.

Create a contactless experience

Patient Portal complements our all-in-one software solution, providing a new way to skip the waiting room and in-person paperwork. Alongside ClearConnect, dental practices are able to create a patient intake experience that saves time and provides peace of mind to both patients and staff.

Simplify your patient intake

Patients can easily fill out patient questionnaires, complete medical documents, and provide patient signatures before arriving for treatment – saving time and eliminating long waiting room queues.

Provide patients with a unique log-in or instant one-time link

Confidential patient documents are accessible through a unique log-in or a one-time instant link for each patient, keeping your data secure and within your server.

Send batch notifications and know when forms are completed

Send out patient forms with ease to your patients using batch e-mail notifications, and filter out patients you've already communicated to. Once completed, screening forms are synced with appointments on your scheduler.

Fully-integrated

Save time and eliminate the need for manual entry or cross-referencing. With Patient Portal, your patient intake responses go directly into their patient file.
